Case 1

1. Scan for stocks between 9:20-9:30 based on high volume (Higher than 31 days average day volume (Repeat case 1 check every Half hour until 11 AM)
2. Enter buy transaction when buy volume high, Enter Sell Transaction when Sell volume high
3. Once it crosses the high/low then the transaction can enter. The entry is the day high or low. However If the high /low depending on buy/short transaction is within 1% of a level then entry must be at a level.
4.

Price	Level	example
100-200	5,10	115, 120
200-500	20,30,50,100	220,330, 350,400
500-2000	50,100,150	550,1100, 1250
2000-5000	100,200,500	2100, 2400, 3500

5. The SL is set at 1% from entry and profit is 5%

Case 2

1. Perform the stock scan at 10:30 AM. Identify stocks where the current trading volume is at least 30% higher than the average volume for 10:30 AM over the past month (31 days). Ensure that the stock price has not moved more than 2% from the opening price.Select stock that meets the criteria
2. Enter buy transaction when buy volume high, Enter Sell Transaction when Sell volume high
3. Once it crosses the high/low then the transaction can enter. The entry is the day high or low. However If the high /low depending on buy/short transaction is within 1% of a level then entry must be at a level.
4.

Price	Level	example
100-200	5,10	115, 120
200-500	20,30,50,100	220,330, 350,400
500-2000	50,100,150	550,1100, 1250
2000-5000	100,200,500	2100, 2400, 3500

5. The SL is set at 1% from entry and profit is 5%
